Technology for a sustainable world

Ecoforest is committed to innovation in order to achieve a sustainable future based on the use of renewable energy. This commitment has led Ecoforest to become a technological leader in the field of Inverter heat pumps, being the only manufacturer whose product range presents such modulating technology in all its models, both geothermal and aerothermal.

Ecoforest heat pumps allow to cover in an integrated way all the thermal needs of current buildings, as well domestic as industrial. Ecoforest offers three types of solutions depending on the energy source used by the equipment: eco-GEO<sup>+</sup> water-to-water geothermal heat pumps, ecoGEO<sup>+</sup> & AU water-to-water aerothermal heat pumps, and ecoAIR<sup>+</sup> aerothermal air-water monobloc heat pumps. All the models in these three ranges make use of Inverter technology to obtain the best performances and thus guarantee comfort and efficiency together with a commitment to make the best use of renewable resources.

Ground source heat pumps

# ecoGEO<sup>+</sup>

## Inverter ground source, the most efficient technology

The ecoGEO<sup>+</sup> range is the Ecoforest range of ground source heat pumps. These heat pumps, both domestic and high power, are compatible with any type of ground source collection system, even with hybrid air source-ground source collection systems and fully air source collection systems. Likewise, they are also capable of offering all the services required in a HVAC system in an integrated way: DHW, Heating, Pool heating, Passive Cooling (or Free Cooling) and Active Cooling.

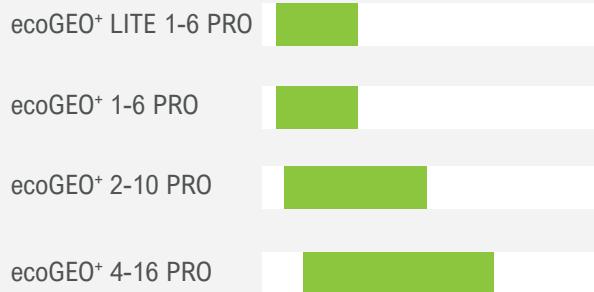

All ecoGEO<sup>+</sup> heat pumps make use of Inverter technology, which allows them to modulate their power in order to adapt to the thermal demands of the installation with the highest efficiency. This translates into a very considerable reduction in electrical consumption and great savings. Thanks to the technology and control strategies developed by Ecoforest, the installation of ecoGEO<sup>+</sup> heat pumps also becomes much simpler, more compact and cheaper than those of other heat pumps on the market, since it allows to dispense with certain components that would be necessary in traditional heat pump installations.

# ecoGEO<sup>+</sup> LITE 1-6 PRO

- Modulating thermal power control within a wide range (12,5-100%) and modulating flow rate control of both brine and production circuits (20-100%).
- Natural refrigerant R290: GWP 3.
- Inverter technology.
- Compact design including brine and production circulation pumps, 7 liter production expansion vessel, brine and production safety valves and DHW three-way valve.
- Integrated management of up to 2 different emission temperatures.
- Integrated management of aerothalermal collection modulating units, in case of air source or hybrid configurations.
- Integrated active cooling.
- Single-phase version available.
- Integrated photovoltaic hybridisation.
- Integrated energy meters to measure the electrical consumption, the heating/cooling thermal power, the COP and the monthly and annual SPF.
- Only 790 mm x 595 mm x 575 mm (height x width x depth).

1. Air source by replacing the ground source circuit by one or more ecoGEO+ AU air units. Consult the ecoGEO+ AU aerothalermal units manual for more detailed information.
2. In compliance with EN 14511, this includes the consumption of the circulation pumps and the compressor driver.
3. Considering brine and production flow rates in compliance with EN 14511.
4. Considering a heat slope from 20°C to 50°C in absence of consumption.
5. Considering support provided by the emergency electrical heater.
6. In compliance with EN 12102.
7. Starting current depends on the working conditions of the hydraulic circuits.
8. The admissible voltage range for proper operation of the heat pump is ±10%.
9. Maximum consumption can vary significantly according to working conditions, or if the compressor's operation range is restricted. Consult the technical service manual for more detailed information.
10. Certification in process

1. Air source by replacing the ground source circuit by one or more ecoGEO<sup>+</sup> AU air units. Consult the ecoGEO<sup>+</sup> AU aerothermal units manual for more detailed information.
2. In compliance with EN 14511, this includes the consumption of the circulation pumps and the compressor driver.
3. Considering brine and production flow rates in compliance with EN 14511.
4. Considering a heat slope from 20°C to 50°C in absence of consumption.
5. Considering support provided by the emergency electrical heater.
6. In compliance with EN 12102.
7. Starting current depends on the working conditions of the hydraulic circuits.
8. The admissible voltage range for proper operation of the heat pump is ±10%.
9. Maximum consumption can vary significantly according to working conditions, or if the compressor's operation range is restricted. Consult the technical service manual for more detailed information.
10. Certification in process.
11. Integrated by default in modules B3/C3 and B4/C4.

# ecoGEO<sup>+</sup> B/C 1-9

- Modulating thermal power control within a wide range (12,5-100%) and modulating flow rate control of both brine and production circuits (20-100%).
- Inverter technology and scroll compressor.
- Compact design including brine and production circulation pumps, brine and production expansion vessels (8l and 12l respectively), brine and production safety valves and DHW three-way valve.
- High Temperature Recovery system (HTR) for DHW production up to 70 °C without electrical support and simultaneous production of DHW and heating/cooling.
- Integrated management of up to 4 different emission temperatures, 2 buffer tanks (heating and cooling), 1 DHW tank, 1 pool and hourly control of DHW recirculation.
- Integrated management of aerothal collection modulating units, in case of air source or hybrid configurations.
- Integrated management of external On/Off or modulating auxiliary systems, such as electrical heaters, On/Off boilers or modulating boilers.
- Integrated management of cascade systems up to 3 units.
- Integrated management of simultaneous cooling/heating systems according to scheme.
- Integrated free cooling in models 2 and 4.
- Integrated active cooling in models 3 and 4.
- Single-phase and Three-phase versions available.
- Integrated photovoltaic hybridisation.
- Integrated energy meters to measure the electrical consumption, the heating/cooling thermal power, the COP and the monthly and annual SPF.

- Modulating thermal power control within a wide range (25-100%) and modulating flow rate control of both brine and production circuits (20-100%).
- Inverter technology and scroll compressor.
- Integrated management of up to 5 different emission temperatures, 2 buffer tanks (heating and cooling), 1 DHW tank, 1 pool and hourly control of DHW recirculation.
- Management of aero-thermal collection modulating units, in case of air source or hybrid configurations by means of the ecoSMART e-source.
- Integrated management of external On/Off or modulating auxiliary systems, such as electrical heaters, On/Off boilers or modulating boilers.
- Management of cascade systems up to 6 units by means of the ecoSMART Supervisor.
- Integrated management of simultaneous cooling/heating systems according to scheme.
- Free cooling (Passive cooling) management.
- Integrated active cooling in models 3.
- Three-phase version available.
- Integrated photovoltaic hybridisation.
- Integrated energy meters to measure the electrical consumption, the heating/cooling thermal power, the COP and the monthly and annual SPF.

Water-to-water air source heat pumps

# ecoGEO+ & AU

## Inverter water-to-water air source, a unique solution

The ecoGEO+ range is the Ecoforest range of water-to-water heat pumps. These heat pumps, both domestic and high power, are compatible with aerothermal collection systems and even with hybrid aerothermal-geothermal collection systems. Likewise, they are also capable of offering all the services required in a HVAC system in an integrated way: DHW, Heating, Pool and Active Cooling.

All ecoGEO+ heat pumps make use of Inverter technology, which allows them to modulate their power in order to adapt to the thermal demands of the installation with the highest efficiency. This translates into a very considerable reduction in electrical consumption and great savings. In addition, this air source solution presents a series of considerable advantages compared to conventional aerothermal units: a lower acoustic emission level, a unique defrost system that results in higher seasonal performance, and an easier installation. Thanks to the technology and control strategies developed by Ecoforest, the installation of ecoGEO+ heat pumps also becomes simpler, more compact and cheaper than those of other heat pumps on the market, since it allows to dispense with certain components that would be necessary in traditional heat pump installations.

# Outdoor aerothal units

## AU6 / AU12 / AU22

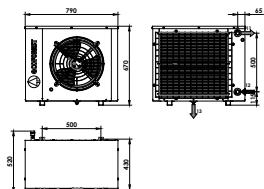

- Outdoor aerothal units.
- Compatibles with ecoGEO<sup>+</sup> B2/C2/B4/C4 models.
- Modulating collection thermal power control by means of the modulation of the fan speed (25-100%) and the modulation of the flow rate control of the brine circulation pump (20-100%).
- Exclusively hydraulic air source system allowing to replace a geothermal collection system by an aerothal or a hybrid geothermal-aerothal system.
- ecoGEO<sup>+</sup> defrost system: defrosting without starting the compressor or activating electrical support systems.
- Working condition as collection system as well as dissipation system.
- Enhanced lifespan of the heat pump, which is placed indoors, compared to outdoor conventional monobloc or biblock units.
- Selection of the defrosting energy source: the ecoGEO<sup>+</sup> control strategies allow to select the energy source for defrosting cycles depending of the installation features (DHW tank, heating buffer tank, pool, ...).

1. Air source by replacing the ground source circuit by one or more ecoGEO<sup>+</sup> AU air units. Consult the ecoGEO<sup>+</sup> AU aerothermal units manual for more detailed information.
2. In compliance with EN 14511, this includes the consumption of the circulation pumps and the compressor driver.
3. Considering brine and production flow rates in compliance with EN 14511.
4. Considering a heat slope from 20°C to 50°C in absence of consumption.
5. Considering support provided by the emergency electrical heater.
6. In compliance with EN 12102.
7. Starting current depends on the working conditions of the hydraulic circuits.
8. The admissible voltage range for proper operation of the heat pump is  $\pm 10\%$ .
9. Maximum consumption can vary significantly according to working conditions, or if the compressor's operation range is restricted. Consult the technical service manual for more detailed information.
10. Certification in process.

- Modulating thermal power control within a wide range (15-100%) and modulating flow rate control of both brine and production circuits (20-100%).
- Natural refrigerant R290 : GWP 3.
- Inverter technology.
- Compact design including brine and production circulation pumps, brine and production expansion vessels (8l and 12l respectively), brine and production safety valves and DHW three-way valve.
- Integrated management of up to 3 different emission temperatures, 2 buffer tanks (heating and cooling), 1 DHW tank, 1 pool and hourly control of DHW recirculation.
- Integrated management of air source collection modulating units, in case of air

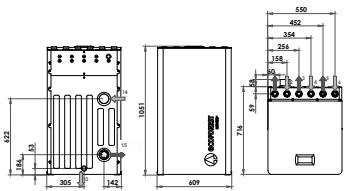

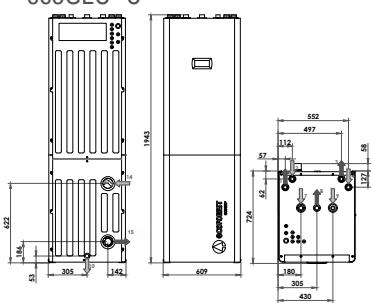

source or hybrid configurations.

- Integrated management of external On/Off or modulating auxiliary systems, such as electrical heaters, On/Off boilers or modulating boilers.
- Exclusive defrosting system
- Integrated active cooling in model 4.
- Single-phase (230V) and three-phase (400V) version available.
- Integrated photovoltaic hybridisation.
- Integrated energy meters to measure the electrical consumption, the heating/cooling thermal power, the COP and the monthly and annual SPF.

1. Air source/Hybrid source by replacing/combining the ground source circuit by/with one or more ecoGEO<sup>+</sup> AU. Consult the ecoGEO<sup>+</sup> AU manual for more detailed information.
2. In compliance with EN 14511, this includes the consumption of the circulation pumps and the compressor driver.
3. Considering brine and production flow rates in compliance with EN 14511.
4. Considering a heat slope from 20°C to 50°C in absence of consumption.
5. Considering support provided by the emergency electrical heater or the HTR system. Maximum DHW temperature with the HTR system can be limited by the compressor discharge temperature.
6. In compliance with EN 12102.
7. Starting current depends on the working conditions of the hydraulic circuits.
8. The admissible voltage range for proper operation of the heat pump is ±10%.
9. Maximum consumption can vary significantly according to working conditions, or if the compressor's operation range is restricted. Consult the technical service manual for more detailed information.
10. Certification in process.

- Modulating thermal power control within a wide range (12,5-100%) and modulating flow rate control of both brine and production circuits (20-100%).
- Inverter technology and scroll compressor.
- Compact design including brine and production circulation pumps, brine and production expansion vessels (8l and 12l respectively), brine and production safety valves and DHW three-way valve.
- High Temperature Recovery system (HTR) for DHW production up to 70 °C without electrical support and simultaneous production of DHW and heating/cooling.
- Integrated management of up to 3 different emission temperatures, 2 buffer tanks (heating and cooling), 1 DHW tank, 1 pool and hourly control of DHW recirculation.
- Integrated management of aerothal collection modulating units, in case of air source or hybrid configurations.
- Integrated management of external On/Off or modulating auxiliary systems, such as electrical heaters, On/Off boilers or modulating boilers.
- Integrated management of cascade systems up to 3 units.
- Exclusive defrosting system.
- Integrated active cooling in models 4.
- Single-phase and Three-phase versions available.
- Integrated photovoltaic hybridisation.
- Integrated energy meters to measure the electrical consumption, the heating/cooling thermal power, the COP and the monthly and annual SPF.

## Hydraulic performance

 PRIMARY

The figure consists of two vertically stacked line graphs sharing a common x-axis representing Durchfluss (m<sup>3</sup>/h) from 0.0 to 7.0.

**Top Graph:** Y-axis is ΔP (Pa). It shows five curves representing different operating conditions for a secondary pump. The curves show a decreasing trend as flow increases, with higher initial pressures resulting in higher final pressures at higher flows.

Durchfluss (m <sup>3</sup> /h)	ΔP 1 (Pa)	ΔP 2 (Pa)	ΔP 3 (Pa)	ΔP 4 (Pa)	ΔP 5 (Pa)
0.0	100	80	60	40	20
2.0	100	80	60	40	20
4.0	80	60	40	20	10
6.0	60	40	20	10	5

**Bottom Graph:** Y-axis is Verbrauch elektrisch (W). It shows five curves representing different operating conditions for a secondary pump. The curves show an increasing trend as flow increases, with higher initial power requirements resulting in higher final power requirements at higher flows.

Durchfluss (m <sup>3</sup> /h)	Verbrauch 1 (W)	Verbrauch 2 (W)	Verbrauch 3 (W)	Verbrauch 4 (W)	Verbrauch 5 (W)
0.0	10	15	20	25	30
2.0	120	110	100	90	80
4.0	120	110	100	90	80
6.0	120	110	100	90	80

 SECONDARY

The graph plots Pressure drop (kPa) on the y-axis (0 to 80) against Flow rate (m³/h) on the x-axis (0.0 to 5.0). Four curves are shown: Condenser (solid line), Evaporator (dashed line), Defrosting (solid line), and AU 12 (dotted line). The AU 12 curve shows the highest pressure drop, followed by the Condenser, then the Defrosting, and finally the Evaporator.

Flow rate (m³/h)	Condenser (kPa)	Evaporator (kPa)	Defrosting (kPa)	AU 12 (kPa)
0.0	0	0	0	0
0.5	~2	~1	~1	~2
1.0	~5	~2	~2	~5
1.5	~8	~3	~3	~8
2.0	~12	~4	~4	~12
2.5	~16	~5	~5	~16
3.0	~20	~6	~6	~20
3.5	~25	~7	~7	~25
4.0	~30	~8	~8	~30
4.5	~35	~9	~9	~35
5.0	~40	~10	~10	~40

# ecoAIR<sup>+</sup>

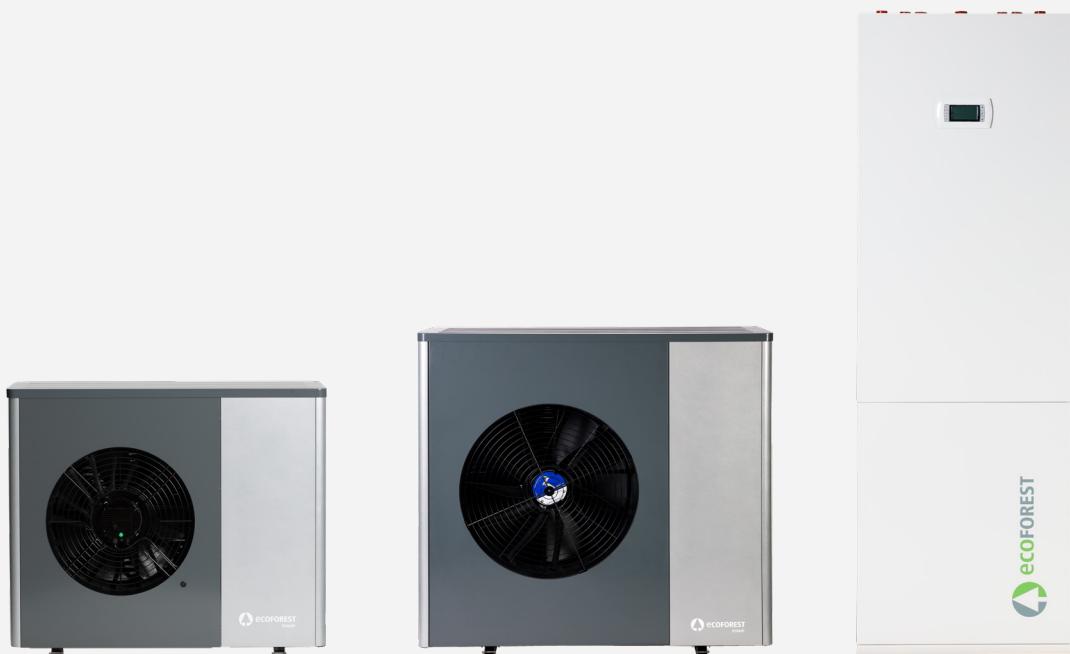

Monobloc air source heat pumps

# ecoAIR<sup>+</sup>

## Monobloc Inverter air source

The ecoAIR<sup>+</sup> range is the Ecoforest range of air-to-water heat pumps. These heat pumps use Inverter technology and are also capable of offering all the services required in a HVAC system in an integrated way: DHW, Heating, Pool and Cooling.

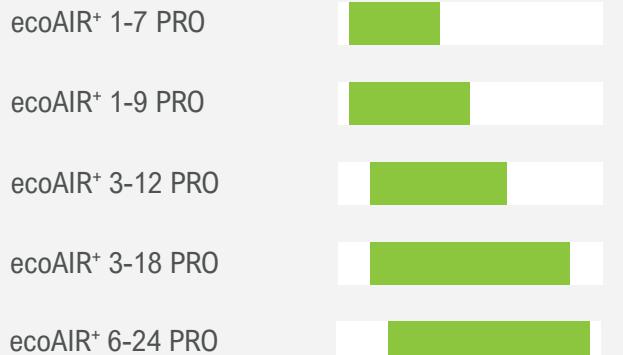

All ecoAIR<sup>+</sup> heat pumps make use of Inverter technology, which allows them to modulate their power in order to adapt to the thermal demands of the installation with the highest efficiency. This translates into a very considerable reduction in electrical consumption and great savings. The ecoAIR<sup>+</sup> EVI heat pumps make a unique use of EVI technology to guarantee unique performances in any operating condition, and the ecoAIR<sup>+</sup> PRO heat pumps use a natural refrigerant, being the only propane monobloc aerothermal heat pumps that have modulation ranges greater than 80%. Thanks to the technology and control strategies developed by Ecoforest, the installation of ecoAIR<sup>+</sup> heat pumps in combination with the HK and HK-Compact indoor units also becomes simpler, more compact and cheaper than those of other heat pumps on the market, since it allows to dispense with certain components that would be necessary in traditional heat pump installations.

Inverter technology

Power ranges: 1-7 kW / 1-9 kW / 3-12 kW / 3-18 kW / 6-24 kW

Natural refrigerant: R290

Hot water production temperatures up to 75°C

Domestic hot water production

Heating and pool production

Integrated active cooling production

Modulating speed fan

Internet connection through the ecoSMART Easynet

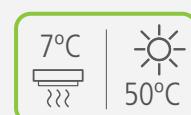

Integrated photovoltaic hybridisation

Single-phase (230V) or three-phase (400V) power supply

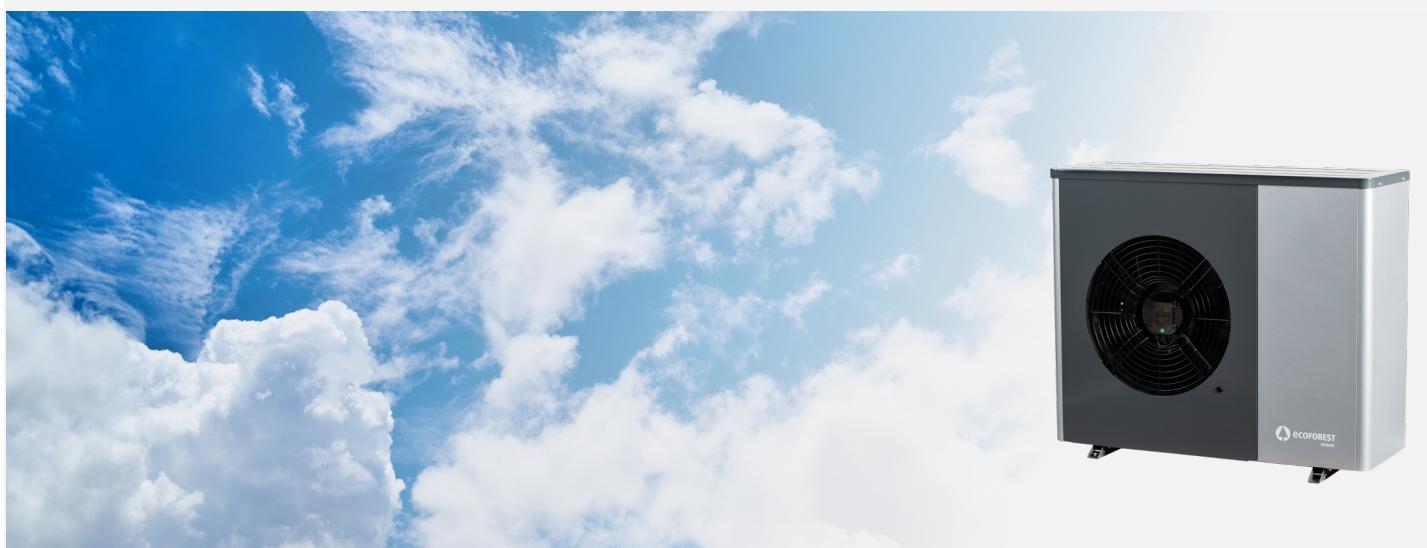

## Unique performances

DHW production and Heating

Cooling

# Indoor units

## CM / HK / HK-Compact

- Indoor hydraulic units to be used in combination with ecoAIR<sup>+</sup> PRO monobloc aerothermal heat pumps.
- CM, HK & HK-Compact: including the electrical box that allows to control the heat pump.
- HK & HK-Compact: including the main hydraulic components of the installation in several combinations.
- HK-Compact: integrating a 165l stainless steel DHW tank.
- Plug&play compact units that make the hydraulic system simpler and the installation easier.
- Single-phase control electrical box.
- Single-phase or Three-phase optional support electrical heater.

# ecoAIR<sup>+</sup> 1-7 PRO

- Modulating thermal power control within a wide range (12,5-100%) and modulating flow rate control of the production circuit (20-100%).
- Natural refrigerant R290 : GWP 3.
- Inverter technology and scroll compressor.
- Compact design including the production circulation pump in the outdoor unit. Hydraulic connection within the outdoor unit and the indoor unit.
- Integrated management of up to 3 different emission temperatures, 2 buffer tanks (heating and cooling), 1 DHW tank, 1 pool and hourly control of DHW recirculation.
- Integrated management of simultaneous heating/cooling emission, according to scheme.
- Integrated management of external On/Off or modulating auxiliary systems, such as electrical heaters, On/Off boilers or modulating boilers.
- Integrated active cooling.
- Selection of the indoor unit depending on the installation needs.
- Single-phase version available.
- Integrated photovoltaic hybridisation.
- Integrated energy meters to measure the electrical consumption, the heating/cooling thermal power, the COP and the monthly and annual SPF.

### Hydraulic performance

# ecoAIR<sup>+</sup> 6-24 PRO

- Modulating thermal power control within a wide range (22-100%) and modulating flow rate control of the production circuit (20-100%).
- Natural refrigerant R290 : GWP 3.
- Inverter technology and scroll compressor.
- Compact design including the production circulation pump in the outdoor unit. Hydraulic connection within the outdoor unit and the indoor unit.
- Integrated management of up to 3 different emission temperatures, 2 buffer tanks (heating and cooling), 1 DHW tank, 1 pool and hourly control of DHW recirculation.
- Integrated management of simultaneous heating/cooling emission, according to scheme.
- Integrated management of external On/Off or modulating auxiliary systems, such as electrical heaters, On/Off boilers or modulating boilers.
- Integrated active cooling.
- Selection of the indoor unit depending on the installation needs.
- Three-phase versions available.
- Integrated photovoltaic hybridisation.
- Integrated energy meters to measure the electrical consumption, the heating/cooling thermal power, the COP and the monthly and annual SPF.

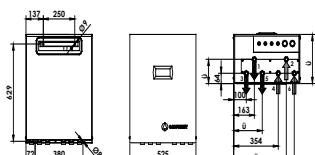

SPECIFICATIONS ecoAIR <sup>+</sup> 6-24 PRO		UNITS	
APPLICATION	Place of installation	-	Outdoors
	Type of brine system <sup>1</sup>	-	Air source
	DHW, Heating and Pool	-	✓
	Integrated Active cooling	-	✓
PERFORMANCE	Modulation range of the compressor	%	22 to 100
	Heating power output <sup>2</sup> , A7W35	kW	4,8 to 27,5
	COP <sup>2</sup> , A7W35	-	5,1
	Heating power output <sup>2</sup> , A7W55	kW	6,5 – 25,9
	COP <sup>2</sup> , A7W55	-	3,2
	Active cooling power output <sup>2</sup> , A35W7	kW	4,7 to 20,5
	EER <sup>2</sup> , A35W7	-	3,6
	Max. DHW temperature without / with support <sup>5</sup>	°C	78 / 80
	Noise power emission level <sup>6</sup>	db	63
	Energy label / $\eta_{SCOP}$ W35 average climate control	-	A+++ / 184 % / 4,46
OPERATION LIMITS	Energy label / $\eta_{SCOP}$ W55 average climate control	-	TBD
	Distribution / Set heating outlet temperature range	°C	10 to 78 / 20 to 70
	Distribution / Set cooling outlet temperature range	°C	5 to 35 / 7
	Outdoor temperature range	°C	-20 - 50
	Minimum / Maximum refrigerant circuit pressure	bar	0,5 / 25,5
WORKING FLUIDS	Production circuit pressure	bar	0,5 to 6,0
	R290 Refrigerant load	kg	1,75
	Compressor oil type / load	kg	RFL68 EP / 1,18
CONTROL ELECTRICAL DATA	Air flow (75% fan)	m <sup>3</sup> /h	TBD
	1/N/PE 230 V / 50-60 Hz <sup>8</sup>	-	✓
	Maximum recommended external protection <sup>9</sup>	-	C5A
	Transformer primary circuit fuse	A	0,5
ELECTRICAL DATA: THREE-PHASE	Transformer secondary circuit fuse	A	2,5
	3/N/PE 400 V / 50-60Hz <sup>8</sup>	-	✓
	Maximum recommended external protection <sup>9</sup>	-	C32A
	Maximum consumption <sup>2</sup> , A7W35	kW / A	6,81 / 9,9
	Maximum consumption <sup>2</sup> , A7W55	kW / A	9,12 / 13,2
DIMENSIONS/WEIGHT	Minimum / Maximum starting current <sup>7</sup>	A	3 / 12
	Correction of cosine Ø	-	0,80 / 1
	Height x width x depth	mm	1675x1430x640
Empty weight (without assembly)		kg	266

1. Outdoor air-to-water monobloc unit.
2. In compliance with EN 14511, this includes the consumption of the circulation pumps and the compressor driver.
3. Considering production flow rate in compliance with EN 14511.
4. Considering a heat slope from 20°C to 50°C in absence of consumption.
5. Considering support provided by the emergency electrical heater.
6. In compliance with EN 12102.
7. Starting current depends on the working conditions
8. of the hydraulic circuits.
9. The admissible voltage range for proper operation of the heat pump is ±10%.
10. Maximum consumption can vary significantly according to working conditions, or if the compressor's operation range is restricted. Consult the technical service manual for more detailed information.
11. Provisional information.

# Indoor units

## CM / HK / HK-Compact

- Indoor hydraulic units to be used in combination with ecoAIR<sup>+</sup> EVI monobloc aerothermal heat pumps.
- CM, HK & HK-Compact: including the electrical box that allows to control the heat pump.
- HK & HK-Compact: including the main hydraulic components of the installation in several combinations.
- HK-Compact: integrating a 165l stainless steel DHW tank.
- Plug&play compact units that make the hydraulic system simpler and the installation easier.
- Single-phase control electrical box.
- Single-phase or Three-phase optional support electrical heater.
